Health Counseling Services Learning Packets

Learning packets offer individualized learning experiences and fit conveniently into daily routines by allowing students as much time as they need to read the information and complete a competency evaluation. The use of an open-book test creates an environment in which learning is evaluated in a consistent, relaxed format.

Each learning packet contains a written training course as well as a test to be duplicated, making it an economical use of your training dollars, since each packet may be used for a number of students.

Detecting the Signs and Symptoms of Illness

\$60.00

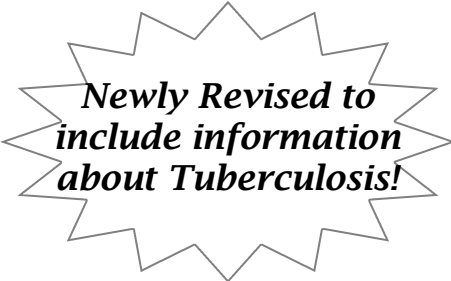

Simply put, illness causes pain and suffering. Effectively treating the illness offers hope for relief. In a community setting the caregivers are the first step in the team process of diagnosing and treating illness.

The goals of this learning experience are to assist caregivers in learning:

1. Effective skills to detect, clarify, document, report and treat the signs and symptoms of illness.
2. Information about vital signs, including body temperature, pulse, respiration and blood pressure.
3. Knowledge of physical, emotional and behavioral changes that occur with illness.
4. Knowledge of the process of detecting and diagnosing illnesses.

Infection Control

\$60.00

***Newly Revised to
include information
about Tuberculosis!***

Detecting infections, providing treatment and preventing the spread of infection are essential to providing quality care. You will protect yourself and others by understanding infection control principles and consistently using infection control techniques.

The goals of this learning experience are to assist caregivers in learning:

1. What causes an infection.
2. How infections are spread.
3. How to prevent infections from occurring.
4. How to prevent infections from spreading.
5. What to do if an exposure incident occurs.

Oral Hygiene

\$60.00

All of us need to consistently brush and floss our teeth thoroughly to prevent tooth decay and periodontal disease. Many people living in community settings are unable to ensure good oral hygiene by themselves. This places them at greater risk for both decay and disease.

The goals of this learning experience are to assist caregivers in learning:

1. How tooth decay and dental disease develop.
2. Methods to prevent tooth decay and gum disease.
3. Proper brushing and flossing as well as denture care.
4. Proper positioning.
5. Effective infection control.
